15

This listing of claims will replace all prior versions, and listings, of claims in the application.

(Currently Amended) An attachment pin arrangement for attaching an exhaust-gas muffler to an apparatus part of a portable handheld work apparatus driven by an internal combustion engine, the exhaust-gas muffler being provided for directing away the exhaust gases of the engine and to attenuate noise, the attachment pin arrangement comprising:

an attachment pin extending between said housing apparatus part and said exhaust-gas muffler; and,

the attachment pin having a threaded section and being threadably engaged with said apparatus part; and,

said attachment pin including at least a partially exposed region region, said region being disposed between said housing apparatus part and said exhaust-gas muffler and said region defining a cooling surface for conducting away at least a part of the heat which is introduced from the exhaust-gas muffler into the attachment pin via radiation and/or convection.

(Currently Amended) The attachment pin arrangement of claim 1, wherein said attachment pin has a collar extending peripherally about said attachment pin and said collar defines a cooling surface.

- (Currently Amended) The attachment pin arrangement of claim 2, said attachment pin collar having a slot extending peripherally about said attachment pin and said slot forming at least part of said cooling surface.
- 4. (Original) The attachment pin arrangement of claim 2, wherein said collar is a first collar and said attachment pin arrangement further comprises a second collar adjacent said first collar.
- (Original) The attachment pin arrangement of claim 4, wherein said attachment pin and said first and second collars are conjointly configured as a single integral piece.
- (Original) The attachment pin arrangement of claim 2, wherein said attachment pin has at least one threaded section for threadably engaging one of said apparatus part and said muffler; and, said collar is configured to have a shape of a hexagon.
- 7. (Original) The attachment pin arrangement of claim 2, wherein said muffler has a holding flange and said attachment pin engages said muffler at said holding flange; and, said attachment pin arrangement further comprises a heat insulating spacer
- 5 disposed between said holding flange and said collar.

5

- 8. (Currently Amended) The attachment pin arrangement of claim 1, wherein said muffler has a holding flange and said attachment pin engages said muffler at said holding flange; and, said attachment pin arrangement further comprises: a holding nut threadably engaging said attachment pin and a heat insulating spacer mounted between said holding flange and said holding nut.
- 9. (Original) The attachment pin arrangement of claim 8, wherein said spacer is configured as a support washer.
- 10. (Original) The attachment pin arrangement of claim 9, wherein said support washer is made of titanium.
- 11. (Original) The attachment pin arrangement of claim 9, wherein said support washer is made of a heat resistant duroplast.
- 12. (Original) The attachment pin arrangement of claim 7, wherein said spacer has a centering collar for said holding flange.
- 13. (Original) The attachment pin arrangement of claim 1, wherein said attachment pin is made of steel.
